Talking Nets: An Oral History of Neural Networks

Talking Nets: An Oral History of Neural Networks

Talking Nets: An Oral History of Neural Networks

Since World War II, a group of scientists has been attempting to understand the human nervous system and to build computer systems that emulate the brain's abilities. Many of the early workers in this field of neural networks came from cybernetics; others came from neuroscience, physics, electrical engineering, mathematics, psychology, even economics. In this collection of interviews, those who helped to shape the field share their childhood memories, their influences, how they became interested in neural networks, and what they see as its future.

The subjects tell stories that have been told, referred to, whispered about, and imagined throughout the history of the field. Together, the interviews form a *Rashomon*-like web of reality. Some of the mythic people responsible for the foundations of modern brain theory and cybernetics, such as Norbert Wiener, Warren McCulloch, and Frank Rosenblatt, appear prominently in the recollections. The interviewees agree about some things and disagree about more. Together, they tell the story of how science is actually done, including the false starts, and the Darwinian struggle for jobs, resources, and reputation. Although some of the interviews contain technical material, there is no actual mathematics in the book.

From reader reviews:

William Harris:

As people who live in the modest era should be revise about what going on or details even knowledge to make these people keep up with the era which can be always change and progress. Some of you maybe will update themselves by examining books. It is a good choice for yourself but the problems coming to anyone is you don't know what type you should start with. This Talking Nets: An Oral History of Neural Networks is our recommendation to help you keep up with the world. Why, as this book serves what you want and need in this era.

Jesus Gilbert:

Now a day folks who Living in the era wherever everything reachable by talk with the internet and the resources in it can be true or not demand people to be aware of each information they get. How a lot more to be smart in getting any information nowadays? Of course the answer is reading a book. Reading through a book can help folks out of this uncertainty Information specifically this Talking Nets: An Oral History of Neural Networks book because book offers you rich data and knowledge. Of course the info in this book hundred per cent guarantees there is no doubt in it everbody knows.

Hye Elliott:

What is your hobby? Have you heard in which question when you got college students? We believe that that problem was given by teacher to their students. Many kinds of hobby, Every person has different hobby. And you know that little person just like reading or as reading through become their hobby. You need to know that reading is very important and book as to be the thing. Book is important thing to incorporate you knowledge, except your own teacher or lecturer. You will find good news or update in relation to something by book. Different categories of books that can you go onto be your object. One of them is Talking Nets: An Oral History of Neural Networks.

Bryan Lewis:

A number of people said that they feel fed up when they reading a book. They are directly felt the idea when they get a half regions of the book. You can choose often the book Talking Nets: An Oral History of Neural Networks to make your own personal reading is interesting. Your own skill of reading expertise is developing when you including reading. Try to choose very simple book to make you enjoy you just read it and mingle the impression about book and looking at especially. It is to be 1st opinion for you to like to wide open a book and read it. Beside that the guide Talking Nets: An Oral History of Neural Networks can to be your brand-new friend when you're truly feel alone and confuse using what must you're doing of these time.
