Physico Chemical Methods in Drug Discovery and Development

This book gives a selection of topics related to the various methods commonly used in pharmaceutical research. The intention, on the one hand, is to provide a theoretical background of the particular technique in order to enable inexperienced readers to gain a general impression of the usefulness of the field. On the other hand, a lot of practical examples will provide scientists, who encounter these methods either in the pharmaceutical research process or in academic institutions, with enough useful information for the successful application of these methods in their everyday work.

The book consists of nine chapters written by the top professionals in the fields of:

- physico-chemical profiling of drugs
- permeability determination and its importance
- chromatography methods in the determination of bio-mimetic properties
- biomolecular interactions and methods
- chiral separation
- polymorphism and different solid forms of drug
- thermal analysis of pharmaceutical solid forms
- Near infrared spectroscopy in pharma research
