**Computational Aspects of General Equilibrium Theory: Refutable Theories of Value (Lecture Notes in Economics and Mathematical Systems)** Donald Brown, Felix Kubler

This monograph presents a general equilibrium methodology for microeconomic policy analysis. It is intended to serve as an alternative to the now classical, axiomatic general equilibrium theory as expounded in Debreu's Theory of Value (1959) or Arrow and Hahn's General Competitive Analysis (1971). The monograph consists of several essays written over the last decade. It also contains an appendix by Charles Steinhorn on the elements of O-minimal structures.
