The information provided will enable both executive management and IT managers to not only validate existing security programs, but also build new business-driven security programs. In addition, the subject matter enables aspiring security engineers to forge a career path to successfully managing a security program that not only adds value to, but also reduces the risk to, the business.

The book begins by resolving immediate tactical needs, transforming security needs into strategic goals, and, ultimately, by helping users put programs into operation with full lifecycle management. Readers will learn how to translate technical challenges into business requirements, understand when to go big or go home, explore in-depth defense strategies, and review tactics on when to absorb risk.

- Teaches how to build consensus with an effective business-focused program
- Presents readers with best practices on how to translate technical challenges into business requirements, understand when to go big or go home, how to explore in-depth defense strategies, and how to know when to absorb risk
