Discrete Data Analysis with R: Visualization and Modeling Techniques for Categorical and Count Data (Chapman & Hall/CRC Texts in Statistical Science) Michael Friendly, David Meyer

An Applied Treatment of Modern Graphical Methods for Analyzing Categorical Data

Discrete Data Analysis with R: Visualization and Modeling Techniques for Categorical and Count Data presents an applied treatment of modern methods for the analysis of categorical data, both discrete response data and frequency data. It explains how to use graphical methods for exploring data, spotting unusual features, visualizing fitted models, and presenting results.

The book is designed for advanced undergraduate and graduate students in the social and health sciences, epidemiology, economics, business, statistics, and biostatistics as well as researchers, methodologists, and consultants who can use the methods with their own data and analyses. Along with describing the necessary statistical theory, the authors illustrate the practical application of the techniques to a large number of substantive problems, including how to organize data, conduct an analysis, produce informative graphs, and evaluate what the graphs reveal about the data.

The first part of the book contains introductory material on graphical methods for discrete data, basic R skills, and methods for fitting and visualizing one-way discrete distributions. The second part focuses on simple, traditional nonparametric tests and exploratory methods for visualizing patterns of association in two-way and larger frequency tables. The final part of the text discusses model-based methods for the analysis of discrete data.

Web Resource

The data sets and R software used, including the authors' own `vcd` and `vcdExtra` packages, are available at <http://cran.r-project.org>.

From reader reviews:

Randall Blake:

A lot of people always spent their own free time to vacation as well as go to the outside with them friends and family or their friend. Do you realize? Many a lot of people spent that they free time just watching TV, or playing video games all day long. If you wish to try to find a new activity this is look different you can read the book. It is really fun in your case. If you enjoy the book that you read you can spent all day long to reading a publication. The book Discrete Data Analysis with R: Visualization and Modeling Techniques for Categorical and Count Data (Chapman & Hall/CRC Texts in Statistical Science) it doesn't matter what good to read. There are a lot of people that recommended this book. These folks were enjoying reading this book. In the event you did not have enough space to bring this book you can buy often the e-book. You can m0ore simply to read this book from your smart phone. The price is not very costly but this book possesses high quality.

Rose Miller:

That book can make you to feel relax. This book Discrete Data Analysis with R: Visualization and Modeling Techniques for Categorical and Count Data (Chapman & Hall/CRC Texts in Statistical Science) was colourful and of course has pictures around. As we know that book Discrete Data Analysis with R: Visualization and Modeling Techniques for Categorical and Count Data (Chapman & Hall/CRC Texts in Statistical Science) has many kinds or type. Start from kids until youngsters. For example Naruto or Private investigator Conan you can read and feel that you are the character on there. Therefore not at all of book are generally make you bored, any it offers you feel happy, fun and relax. Try to choose the best book for you and try to like reading that.

Krystal Sutherland:

As a student exactly feel bored to reading. If their teacher expected them to go to the library or make summary for some guide, they are complained. Just small students that has reading's heart and soul or real their passion. They just do what the educator want, like asked to the library. They go to right now there but nothing reading seriously. Any students feel that reading through is not important, boring and can't see colorful photographs on there. Yeah, it is being complicated. Book is very important to suit your needs. As we know that on this period of time, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. Therefore this Discrete Data Analysis with R: Visualization and Modeling Techniques for Categorical and Count Data (Chapman & Hall/CRC Texts in Statistical Science) can make you really feel more interested to read.

Taylor Becker:

What is your hobby? Have you heard in which question when you got college students? We believe that that

concern was given by teacher to their students. Many kinds of hobby, All people has different hobby. And also you know that little person including reading or as reading through become their hobby. You must know that reading is very important as well as book as to be the issue. Book is important thing to incorporate you knowledge, except your teacher or lecturer. You get good news or update with regards to something by book. Many kinds of books that can you choose to adopt be your object. One of them is this Discrete Data Analysis with R: Visualization and Modeling Techniques for Categorical and Count Data (Chapman & Hall/CRC Texts in Statistical Science).
