Identifying and Harvesting Edible and Medicinal Plants in Wild (and Not So Wild) Places Steve Brill, Evelyn Dean

Identifying and Harvesting Edible and Medicinal Plants in Wild (and Not So Wild) Places shows readers how to find and prepare more than five hundred different plants for nutrition and better health, including such common plants as mullein (a tea made from the leaves and flowers suppresses a cough), stinging nettle (steam the leaves and you have a tasty dish rich in iron), cattail (cooked stalks taste similar to corn and are rich in protein), and wild apricots (an infusion made with the leaves is good for stomach aches and digestive disorders).

More than 260 detailed line drawings help readers identify a wide range of plants -- many of which are suited for cooking by following the more than thirty recipes included in this book. There are literally hundreds of plants readily available underfoot waiting to be harvested and used either as food or as a potential therapeutic. This book is both a field guide to nature's bounty and a source of intriguing information about the plants that surround us.

Debra Sudduth:

As a student exactly feel bored to help reading. If their teacher expected them to go to the library in order to make summary for some book, they are complained. Just little students that has reading's heart or real their interest. They just do what the professor want, like asked to go to the library. They go to at this time there but nothing reading very seriously. Any students feel that looking at is not important, boring and also can't see colorful photographs on there. Yeah, it is to get complicated. Book is very important for yourself. As we know that on this time, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country. Therefore this Identifying and Harvesting Edible and Medicinal Plants in Wild (and Not So Wild)

Places can make you truly feel more interested to read.
